

Arun Selvan G J

Senior DevOps and Cloud Platform Engineer | AWS | Kubernetes | AI-Driven Automation

Chennai, India | gjarunselvan@gmail.com | +91-7448440011 | linkedin.com/in/gjarunselvan | portfolio.gjarunselvan.online

EXECUTIVE SUMMARY

Senior DevOps and Cloud Platform Engineer with **9 years** of experience designing, architecting, and operating large-scale, highly available cloud-native systems across enterprise environments. Expertise in Amazon Web Services (AWS), Kubernetes, Infrastructure as Code (IaC), continuous integration and continuous delivery (CI/CD), Linux, observability, DevSecOps, platform engineering, and AI-driven automation. Delivered **40%+** faster release frequency, **35%** lower mean time to recovery (MTTR), **99.99%** uptime, and **30%** cloud cost optimization through reliability-focused platform modernization.

CORE SKILLS

Cloud Platforms: AWS (EC2, S3, IAM, VPC, RDS, EKS, CloudWatch, Lambda), OneOps

Containerization & Orchestration: Kubernetes (EKS), Docker, Helm

Infrastructure as Code: Terraform, CloudFormation

CI/CD & DevOps Tools: Jenkins, GitHub Actions, GitLab CI, Argo CD

Configuration & Scripting: Ansible, Python, Bash, Linux (RHEL, Ubuntu)

Monitoring & Observability: Prometheus, Grafana, Splunk, ELK Stack

DevSecOps & Networking: security hardening, IAM policies, vulnerability management, TCP/IP, DNS, load balancing, firewalls

Practices & AI: SRE, high availability, disaster recovery (RTO/RPO), blue-green/canary releases, LLMs, RAG, multi-agent systems, AI Ops

PROFESSIONAL EXPERIENCE

Senior Systems Engineer III / Senior DevOps Engineer

Walmart Global Tech

Nov 2020 - Present

Chennai, India

- Architected enterprise CI/CD and GitOps pipelines using Jenkins and Argo CD, improving release frequency by **40%+**.
- Designed and operated Kubernetes services on Amazon EKS to handle **3x** traffic growth with zero downtime.
- Reduced cloud infrastructure spend by **30%** through rightsizing, autoscaling, and resource governance.
- Built Infrastructure as Code standards with Terraform and CloudFormation for consistent, faster environment provisioning.
- Automated operational workflows with Python, Bash, and Ansible, reducing manual effort by **60%** and improving deployment efficiency by **50%**.
- Implemented observability with Prometheus, Grafana, and Splunk, reducing MTTR by **35%** and sustaining **99.99%** uptime.
- Designed AI-driven DevOps solutions for log analysis, incident diagnostics, and release-note generation.
- Built multi-agent orchestration integrating APIs, CLI tools, and cloud services, improving selected workflow throughput by **200%**.
- Architected RAG-based AI systems with memory layers and evaluation frameworks for decision automation.
- Strengthened DevSecOps compliance through IAM policy governance, patching, and vulnerability remediation.
- Standardized infrastructure and release documentation patterns for faster onboarding and operational continuity.

System Engineer (DevOps / Linux / Cloud Support)

Cognizant Technology Solutions

Aug 2017 - Nov 2020

India

- Administered and hardened Linux production environments and automated backup, patching, and user workflows using Bash.
- Implemented Prometheus and Grafana monitoring for proactive issue detection and faster incident response.
- Provided L2/L3 support for complex production infrastructure and application incidents in cloud and Linux environments.
- Standardized recurring operational runbooks to reduce repeated incident patterns and improve recovery consistency.
- Automated user-management and maintenance operations, improving execution consistency across routine platform tasks.
- Collaborated with application and operations teams to improve handoff quality and reduce recurring production issues.

KEY PROJECT HIGHLIGHTS

- Designed Kubernetes-based microservices architecture for high-traffic applications and resilient production scaling.
- Built end-to-end CI/CD pipelines with automated testing, blue-green rollouts, canary releases, and controlled deployments.
- Implemented observability and alerting systems for enterprise production workloads and faster incident response.
- Developed AI-powered DevOps automation use cases for diagnostics, release documentation, and infrastructure knowledge workflows.
- Improved release governance with deployment safety checks, phased rollout controls, and operational readiness gates.

EDUCATION

Bachelor of Engineering in Computer Science, Jeppiar Institute of Technology, Chennai

2013 - 2016
